> Fact Sheet

What does SAS/ACCESS® software do?

SAS/ACCESS is an out-of-the-box solution for integrating SAS and third-party databases. You can read, write and update data regardless of the database or platform. Because the data appears native to SAS, there is no need to learn Structured Query Language (SQL) or any other database-specific query languages.

Why is SAS/ACCESS® software important?

With integration at its source, business decisions are supported by complete, consistent, up-to-date and accurate data. Any source of data can be made available when you need it, plus you can add access modules without replicating or moving the source data.

For whom is SAS/ACCESS® software designed?

SAS/ACCESS is designed for organizations that need to bring different source system data together into a cohesive and unified environment. It's used by data management professionals and business analysts who are responsible for accessing data in support of applications and business objectives.
